Introduction

Starting from ICT version 5.3A, ICT AP has been integrated with AP 5.3 for invoice entry, invoice printing, and posting journal printing. This was achieved by first adding "intercompany" fields and functionality to AP 5.3, and then changing the ICT menus to run the AP programs instead of the ICT programs.

Starting from ICT version 5.3A, ICT GL has been integrated with GL 5.3 for batch entry, batch printing, and posting journal printing. This was achieved by first adding "intercompany" fields and functionality to GL 5.3, and then changing the ICT menus to run the GL programs instead of the ICT programs.

This merger of ICT and AP/GL has the following advantages:

- No duplicate data tables
- No duplicate code
- No duplicate reports

- No duplicate information in techinfo.wri document
- Latest changes in AP/GL will automatically be a part of ICT AP/GL

Starting from ICT version 5.4A, this document will only list the database and report changes for ICT programs and reports. All database and report changes for AP and GL are located in their respective Technical Information sections.
